THE SERVICE PORTFOLIO

Your challenge.
The right expertise.
A clear next step.

Connect technology, structures and people with purpose. Explore the services of Lukas Günther Teissl and find an approach that fits your starting point.

6 service areas. One clear perspective.

With complete current service descriptions, relevant images and direct links to the website.

UPDATED 16 NOV 2026 · EN · PRINT EDITION

UNDERSTAND. CONSIDER. MOVE FORWARD.

Good collaboration starts with the right question.

What needs to become simpler, clearer or more reliable? That question is a useful starting point for finding the right support.

This portfolio brings the current service areas together in one complete edition. IT consulting and business optimisation are the central offer. Complementary specialist areas and the talent network are presented with their own purposes, possibilities and boundaries.

01

Choose your starting point.

Which area relates to the task you are considering? The contents take you directly to the relevant service description.

02

Consider the fit.

Read the focus areas, approach and requirements. The stated boundaries help clarify responsibilities and expectations from the beginning.

03

Define a practical next step.

Note what you want to achieve and where you need support. Then choose the relevant enquiry route on the service page.

IT Consulting & Business Optimisation

Less friction. Clearer processes. Technology that genuinely moves your business forward.

Lukas Günther Teissl · Updated 16 Nov 2026

I analyse how your business actually works today – from processes and data to sales, communication and recurring tasks. The result is a prioritised roadmap. Where useful, I can implement the technical solutions directly.

My practical guide for business owners

AI EXPERT

AI & automation for revenue optimisation

The knowledge in the book. The implementation for your business.

In my book, I explore how AI and automation connect to concrete business goals. When we work together, I take the next step with you: from analysing your workflows to implementing a technical solution that fits your business.

- **Save time** Simplify recurring work with a clear purpose.
- **Connect processes** Bring AI, software and workflows together.
- **Spot revenue opportunities** Make enquiries and follow-ups more reliable.

Explore custom systems

Typical starting point

Potential is rarely lost in only one place.

Time loss, errors and unnecessary costs usually arise where people, processes and systems do not work together cleanly. The consulting process therefore looks at the business as one connected workflow.

Duplicate data entry

Information is re-entered across multiple systems, spreadsheets or lists – creating unnecessary work and increasing the risk of errors.

Manual routines

Recurring administration consumes specialist time even though parts of the workflow can be simplified or automated reliably.

Unclear handovers

Status, ownership and the next step are not visible centrally. Follow-up questions and waiting times become the normal way of working.

Distributed customer processes

Leads, appointments, proposals, documents and follow-ups run through different channels and lose consistency as a result.

Isolated AI experiments

Individual AI tools have been tested, but they are not integrated into clear processes or reliable quality control.

Growth without structure

More clients, data or employees increase complexity and coordination needs instead of making the organisation more scalable.

Consulting objective

Not more software, but less friction.

Current state A reliable picture of the actual workflows, systems, data sources and responsibilities.

Priorities A transparent order of priorities based on value, effort, dependencies and risk.

Roadmap Quick improvements clearly separated from structural projects and later expansion stages.

Measurability Concrete criteria for evaluating adoption, quality, time savings and process improvement.

Structured analysis

From observation to a sound decision.

The analysis is not a generic workshop or a loose collection of technical ideas. It creates clarity about what should actually be improved, in what order and with what expected outcome.

Guiding question Which problem should be solved – and which solution is economical, secure and practical in day-to-day use?

01

Understand

Business model, objectives, roles, systems, data sources and customer journeys are examined in the real working context.

Shared understanding of the problem

02

Analyse

Bottlenecks, tool hand-offs, recurring tasks, risks and technical dependencies are documented transparently.

Traceable current state

03

Prioritise

Measures are assessed by their impact on time, quality, cost and customer experience, as well as by effort and risk.

Sound basis for decision-making

04

Implement & measure

Suitable process changes, integrations, automations or custom systems are implemented step by step.

Working solution instead of a presentation

Holistic optimisation

Four levers considered together.

A better outcome usually does not come from one isolated measure, but from the coordinated interaction of workflows, automation, systems and customer experience.

01

Processes & responsibilities

Workflows become simpler, responsibilities clearer and handovers more reliable.

- Make status, roles and next steps visible
- Reduce tool hand-offs and unnecessary loops
- Document recurring workflows clearly

02

AI & automation

AI is used selectively where it creates measurable value.

- Structure enquiries, documents and notes
- Prepare responses and follow-ups with human oversight
- Automatically surface tasks, reminders and exceptions

03

Systems & integrations

Existing tools are connected sensibly or selectively extended where needed.

- Data flows between forms, CRM and internal tools
- Integrations, roles, permissions and logging

- Internal applications for specialised workflows

04

Sales & customer experience

A consistent process is created from first contact through ongoing collaboration.

- Capture lead status, history and next action centrally
- Manage proposals, appointments and follow-ups reliably
- Align client portals, forms and websites with real business goals

Data protection, access rights, logging, backups and human oversight are considered during the design phase – not only after technical implementation.

Technology decision

The right solution is never more complicated than necessary.

Custom software is one option – but not automatically the best one. What matters is which approach delivers the desired value with reasonable effort and risk.

Improve existing systems

If a system is fundamentally suitable, the biggest gains often come from better configuration, clearer roles and cleaner workflows.

Connect standard solutions

When several tools are needed, integrations and automated data flows can create an economical overall solution.

Develop a custom solution

When specialised processes, roles or competitive advantages justify it, a tailored application can be built instead of an overloaded compromise.

Clear principle: No technology for its own sake. No automation without a business case. No custom development when standard software meets the need better.

Frequently asked questions

Concrete answers before the project starts.

The scope depends on the actual problem. A project can begin with one critical workflow and be expanded later.

Discuss an open question personally

How extensive does the initial analysis need to be?

That depends on the starting point. It may be a focused review of a single process or a cross-functional analysis. Scope, objective and expected outcome are clearly defined in advance.

Does every improvement require new software?

No. Better configuration, clearer workflows or connecting existing systems are often more economical. Custom software is recommended only when it provides clear additional value.

Can existing systems be integrated?

In many cases, yes. Available interfaces, data quality, permissions, security and technical constraints are decisive. These points are reviewed before any binding implementation.

Where can AI be used effectively in a business?

Typical areas include structured processing of enquiries and documents, communication preparation, knowledge access and task or reminder logic. Clear processes, suitable data and defined human oversight are prerequisites.

How are results made measurable?

Before implementation, suitable criteria are defined, such as fewer manual steps, shorter processing times, better data quality, transparent responsibilities or more reliable follow-ups. There are no unsupported revenue or success guarantees.

Can implementation be phased?

Yes. Prioritised implementation in manageable stages is often more sensible than a major all-at-once rebuild. Experience from real use can then inform the next steps.

The next step

Where is your business currently losing time, visibility or opportunities?

You do not need a finished specification. For an initial conversation, an honest description of the starting point, the biggest bottleneck and the desired outcome is enough.

- personal, no-obligation introductory call
- clear assessment of the most sensible next step
- no commitment to software or a large project

Accounting & International Structures

Clear figures, organised administration and traceable processes.

Lukas Günther Teissl · Updated 16 Nov 2026

I support companies with operational accounting, reporting, document organisation and the coordination of international administrative matters. Tax and legal specialist advice is clearly separated and, where needed, coordinated with appropriately licensed partners.

Accounting & International Structures

Discuss your situation

View references

Operational accounting Reporting Document structure International coordination

Credibility before breadth My own operational services, coordination activities and external specialist advice remain transparently separated.

Structure instead of administrative chaos

Create order before complexity grows.

Fragmented records, inconsistent filing, missing reconciliations and unclear ownership make decisions harder and increase administrative effort. The goal is a reliable structure in which information is complete, traceable and available at the right time.

Clear responsibilities

Operational activities, technical process improvements and collaboration with tax advisers, accountants, lawyers or corporate service providers are organised in a transparent, traceable way.

Potential areas of focus

What can be structured and supported in practice.

Ongoing accounting

Organise records, entries, reconciliations and recurring processes.

Reporting & visibility

Prepare regular reports and clear information for decision-making.

Document structure

Organise records, contracts, evidence and company documents transparently.

International administration

Coordinate obligations, deadlines, contacts and processes across structures.

Company formation coordination

Structure requirements and providers and work with the responsible specialists.

Interface to specialists

Prepare documents and questions for accountants, tax advisers, lawyers and corporate-service providers.

How I work

A clear process with transparent responsibilities.

Starting point

Capture objectives, existing documents, systems and stakeholders.

Review

Structure requirements, risks, gaps and open decisions.

Prioritise

Order next steps by relevance, dependencies and effort.

Coordinate

Separate my own work clearly from external specialist services.

Document

Record decisions, responsibilities and outcomes transparently.

Transparent scope

What this service deliberately does not claim.

I do not present regulated tax or legal advice as my own service without the required licence. Tax planning, legal opinions and binding legal assessments are provided by the relevant licensed professionals. My role may include operational accounting, structure, preparation, coordination and technical process improvement.

Frequently asked questions

Answered briefly and transparently.

Do you provide tax advice?

Not as my own regulated service without the relevant licence. Tax matters are handled together with licensed tax advisers or equivalent specialists.

Can international companies be supported?

Operational administration, reporting, document organisation and coordination can be supported internationally. Specific legal and tax requirements are reviewed by the responsible professionals.

Can accounting processes be automated?

Yes, where data, interfaces and controls make it sensible. Automation can support capture, allocation, approvals, reminders and reporting, but does not replace necessary professional review.

Is a one-off structure review possible?

Yes. An engagement can be limited to reviewing existing processes, documentation and responsibilities.

Non-binding enquiry

Briefly describe your starting point.

The first step is to clarify whether the matter falls within my own scope and which licensed specialists may be required.

Portfolio Intelligence · Analysis & perspective

Experience meets analytical thinking

Built on personal experience. Created to share.

My interest began with a personal question: how can I structure my own capital more consciously and really understand the reasoning behind my decisions?

Over the years I have explored asset classes, business models and portfolio principles, while exchanging perspectives with specialists. Today these experiences inform my financial education work.

> “I am interested not only in what a concept promises, but in how it actually works.”
>
> Lukas Teissl

How I work

The right questions make the difference.

I explain frameworks and methods for your own research. Information, assumptions and personal assessments should remain distinguishable.

01

Understand the fundamentals

What roles do liquidity, time horizons and diversification play? Learn the principles behind a comprehensible portfolio structure.

02

Review information

How is economic value created? Explore general questions about business models, costs, access, opportunities and risks.

03

Develop your perspective

Compare sources, question assumptions and document open issues. Use this approach to pursue your own research with greater focus.

Connecting perspectives

A personal point of contact. A professional network.

Over the years, I have built a network of professionals and specialist contacts. These exchanges complement my own perspective on financial, entrepreneurial and technological topics.

My focus

Financial education, research and accessible explanations of general portfolio concepts.

Specialist questions

On request, I can introduce contacts. Services, responsibilities and terms are agreed directly with the relevant partner.

Fundamentals Analysis Financial education

Orientation before a decision

Looking for a financial expert? Define what you need first.

Do you want to build financial knowledge, understand business figures or discuss a personal investment decision? These are different tasks. The offering on this page focuses on financial education, analytical methods and sharing knowledge.

Understand financial foundations

Work through terminology, money management and portfolio foundations in a structured way. From Income to Freedom is an introduction to these subjects.

Check the provider and the service

Ask about the specific service, compensation and possible conflicts of interest. Check any required authorization with the body responsible for your country and the activity concerned.

Distinguish education from advice

A book or educational resource does not replace individually assessed investment, tax or legal advice. A title or IT certificate alone does not establish the corresponding authorization.

Explore the finance book ->

Read knowledge and analysis ->

Good to know

A clear starting point.

How can I become part of the VIP investor network?

Investor Access introduces you to my approach and my network. In a personal, no-obligation conversation, we discuss your interests, potential connections and the relevant requirements. Together, we explore whether and how access and further steps could be right for you.

Where should I begin?

The book offers an initial overview. The course is designed for structured learning. Portfolio Intelligence introduces my approach and further information materials.

What happens in an information call?

We discuss general learning questions and my educational resources. You can explore which learning content fits your current knowledge and learning goals.

Will I receive personal buy recommendations?

My offer comprises general financial education, research and analytical context. Personal recommendations to buy, sell or hold specific investments, and the management of client funds, are not part of my services.

How does access to Portfolio Intelligence work?

Public information is available to view directly. You can create an account for additional information; certain documents are released on request. Registration is not an investment decision.

Personal exchange

Your next step begins with understanding.

Have a question about an educational resource or my approach? Tell me which topics you would like to understand better.

Arrange an information call

Email me directly **contact@lukasteissl.com**

Scope & transparency

This offer covers general financial education, research and analytical context. Personal conversations explain these educational topics. Personal recommendations to buy, sell or hold specific investments and the management of client funds are not part of my services.

Compensation may arise from certain partner introductions; relevant connections are disclosed alongside the respective offer. Specific project information and associated notices are available on the linked platform.

04 · ADDITIONAL EXPERTISE

IT Security & Cyber Security

Identify risks. Prioritise measures. Improve security sustainably.

Lukas Günther Teissl · Updated 16 Nov 2026

I help companies assess technical and organisational risks systematically, harden access and systems, and improve response capability – pragmatically, transparently and in proportion to the actual risk situation.

IT Security & Cyber Security

Discuss your situation

View references

Risk-based Technical + organisational Clearly documented

Principle

Risk-based rather than fear-driven.

Security is addressed through clear ownership, realistic threats and effective measures — not dramatic scare tactics.

- No unrealistic “100% secure” promises
- Priorities instead of confusing action lists
- Consider technology, processes and responsibilities together

Understand the security situation

The greatest risks often arise at the interfaces.

Accounts, permissions, outdated systems, missing backups, unclear ownership and external services need to be assessed together. A single security tool does not create a resilient security structure.

Holistic perspective

Technical safeguards work best when processes, roles and recovery are as clearly defined as systems and access.

Potential areas of focus

From access to recovery: security as an integrated system.

The exact scope depends on your starting point. The following areas show which topics are typically considered together.

Inventory & risk

Capture systems, data, access, dependencies and relevant threats in a structured way.

Identity & access

Improve accounts, roles, MFA, password processes and least-privilege access transparently.

Hardening & updates

Review configuration, patch status, unnecessary services and secure defaults.

Backup & recovery

Review backup strategy, separation, protection and realistic recovery tests.

Logging & response

Make important events visible and define clear responsibilities for incidents.

Secure development

Consider input, sessions, access, secrets, error handling and deployment.

How I work

A clear process instead of security actionism.

The goal is not to generate as many measures as possible, but to make the right risks visible and implement improvements in a sensible order.

01

Understand the starting point

Systems, access, data, processes and dependencies are captured so that the actual risk situation becomes visible.

02

Classify risks

Not every weakness is equally critical. Relevance, likelihood and potential impact are prioritised sensibly.

03

Prioritise measures

Technical and organisational steps are put into a realistic order based on impact, effort and dependencies.

04

Support implementation

Suitable measures are implemented in practice, documented and reviewed where follow-up checks are useful.

Technology + organisation

Security problems are rarely purely technical.

A well-configured system helps little if permissions are unclear, backups are never tested or no one knows who makes decisions during an incident. That is why technical and organisational aspects are considered together.

Discuss the starting point

Technical layer

- Identities, roles and MFA
- System hardening and patch status
- Backup, separation and recovery
- Logging, secure development and deployment

Organisational layer

- Clear responsibilities
- Access and offboarding processes
- Incident response paths
- External services and dependencies

Transparent scope

No claims of absolute security and no unsupported certification promises.

Security measures reduce risk but do not eliminate it. In-depth penetration testing, specialist forensics or formal certification may require additional independent specialists depending on the project.

Frequently asked questions

What a serious security review can achieve.

Is everything secure after a review?

No. A credible security review identifies risk and improves controls but cannot guarantee absolute security.

Can existing web applications be reviewed?

Yes, within a clearly defined scope. Depending on depth, code review, configuration review or independent specialist testing may be appropriate.

What role do backups play?

Backups are central to resilience. It is not enough that copies exist; separation, retention, access protection and tested recovery also matter.

Is the organisational side also reviewed?

Yes. Access, roles, devices, offboarding, responsibilities and response paths can be just as important as technical safeguards.

Non-binding enquiry

Which security question would you like to clarify first?

For the first step, a few concrete details are enough: Which systems or processes are affected, what currently concerns you and which decision would you like to make on a sound basis?

Book an introductory call Assess the starting point personally

05 · ADDITIONAL EXPERTISE

Transaction Coordination

Structure complex transactions clearly. Keep roles properly separated.

Lukas Günther Teissl · Updated 16 Nov 2026

I help bring stakeholders, documents, review points, specialist partners and next steps into a traceable process. Regulated legal, payment, escrow or custody services remain clearly with the appropriately authorised parties.

International transaction coordination

Discuss the transaction

View the process

Parties & responsibilities Documentation & approvals Clear regulatory separation

Structure before speed

In international transactions, clarity matters more than additional complexity.

The more stakeholders, jurisdictions, documents and review requirements come together, the more important clear responsibilities, robust documentation and a central status become. Structured coordination can reduce unnecessary friction precisely at this interface.

My focus is on organisation, communication and technical process support: making open issues visible, documenting responsibilities, bringing documents together in an orderly way and coordinating collaboration with external specialists transparently.

Important scope boundary

Coordination is not custody.

Client funds are not held merely because coordination is provided. Account holder, contracting party, legal role and regulatory responsibility must be clearly established before a transaction.

Coordination throughout the transaction

Six areas where a clear structure creates particularly strong visibility.

The exact scope is defined in advance. The key point is that my own services and regulated third-party services remain clearly distinguishable at all times.

01

Parties & responsibilities

Structure stakeholders, roles, contacts, responsibilities, communication paths and dependencies clearly.

02

Documents & data room

Organise documents, evidence, versions and approval status transparently and, where useful, represent them technically in a protected data room.

03

Coordinate specialists

Integrate lawyers, law firms, banks, escrow providers or other specialists into a clear information and decision flow.

04

Checks & dependencies

Make KYC, compliance, contractual, documentation and payment requirements visible as open items without replacing regulatory approvals.

05

Status & communication

Consolidate questions, decisions, deadlines and next steps in one traceable place instead of spreading information across many channels.

06

Technical workflows

Structure approvals, status updates, document exchange and permissions so that the process remains transparent to the participants.

How I work

From the first overview to an orderly handover.

A clear process helps identify open issues early and keeps regulated tasks where they belong.

01

Capture the starting point

The objective, subject matter, parties, countries, existing documents and desired process are first recorded in an orderly way.

02

Define roles

It is made clear who coordinates, who reviews, who the contracting party is and which services require authorisation.

03

Structure review points

Documents, open questions, dependencies, deadlines and required approvals are placed into a traceable sequence.

04

Coordinate specialist advisers

Required lawyers, banks, escrow providers or other authorised parties are involved with clear responsibilities.

05

Document status

Decisions, approvals, open issues and next steps remain transparently documented through to handover.

Transparent scope

Trust is also built by not mixing responsibilities.

My own work may include analysis, organisation, introductions, technical process support and transaction coordination. Regulated tasks are performed separately by the appropriately authorised party.

Coordination & process

What I can handle

- Structure the transaction workflow
- Coordinate documents and status
- Bring stakeholders and specialists together
- Support technical data rooms and approval processes
- Document decisions and open issues transparently

Regulated third-party service

What remains with authorised parties

- Legal advice and contract drafting where authorisation is required
- Binding KYC/AML reviews and approvals
- Account operation and payment processing
- Fiduciary custody or escrow services
- Other regulated activities requiring their own engagement relationship

Which parties are specifically required always depends on the subject matter, parties, countries, payment routes and legal structure of the transaction.

Typical starting points

Where structured coordination can be particularly helpful.

Multiple countries or jurisdictions

When parties, documents or specialists are spread across different jurisdictions and the overall status would otherwise be difficult to track.

Multiple participants

When buyers, sellers, advisers, lawyers, banks or other parties with different responsibilities need to be coordinated.

Document-intensive workflows

When versions, evidence, approvals and open issues need to be brought together securely and transparently.

Dependent review steps

When individual steps can only sensibly proceed after certain documents, decisions or external approvals.

Frequently asked questions

What should be clarified before an introductory call.

Do you hold client funds yourself?

A coordination service does not include custody. Actual custody may only be provided on the basis of clear legal and regulatory authority. Appropriately authorised lawyers, law firms, banks or escrow providers will normally perform that role.

Which transactions can be coordinated?

The possible scope depends on the subject matter, parties involved, countries, payment routes and available specialists. At the outset, we therefore assess whether a credible and lawful structure exists and which role I can sensibly take.

Do you approve KYC or AML?

Documents and workflows can be coordinated organisationally. Binding reviews, assessments or approvals are performed by the responsible, appropriately authorised party.

Can a protected data room be set up?

Yes, where this is useful for the transaction. Documents, permissions, approvals and status information can be structured technically. The exact implementation depends on the requirements of the specific transaction.

How does a collaboration begin?

In the first conversation, the starting point, stakeholders, countries, desired process and open issues are outlined. This then makes it possible to define clearly which coordination or technical services are useful and which external specialists may be required.

Non-binding enquiry

Briefly describe the transaction and its current status.

For an initial assessment, a few concrete details are enough: What is the transaction about, which parties or countries are involved and where is coordination currently needed?

Clarify the role first My own services and external specialist services are transparently separated.

Reduce complexity Open issues, documents and responsibilities are made visible in a structured way.

Technology only where useful Data rooms, approvals or status workflows are used selectively where useful.

Travel. Meet people. Create connections.

WHY I CREATED TALENT

My most valuable discoveries while travelling? People.

I have spent more than ten years travelling internationally. Across over 40 countries, I have met people with something distinctive: presence, creativity, skill and a personality you remember. Often, what is missing is not talent, but access to the right contacts.

At the same time, my business activities and personal encounters have helped me build a substantial network. TALENT brings these two worlds together: people who want to show their potential, and agencies or businesses looking for the right personalities for their projects.

> A good network becomes more valuable when it creates genuine possibilities for other people.
>
> Lukas Teissl

I contribute my contacts, my own experience in front of the camera and my understanding of digital processes.

DIFFERENT TALENTS. RELEVANT POSSIBILITIES.

What makes you distinctive deserves to be seen.

Model scouting is the main focus, particularly for women interested in exploring opportunities in front of the camera. Creators, performers and other people with distinctive skills are equally welcome.

Model in a light blazer illustrating fashion and commercial work

FASHION · COMMERCIAL · LIFESTYLE

Models & personalities

For people with presence, character and an interest in photography, advertising or fashion projects. You can introduce yourself without existing agency representation.

Introduce my talent

Creative portfolio work in a studio

CONTENT · BRANDS · CAMPAIGNS

Content creators

Do you develop ideas, tell stories or feel at home in front of the camera? Share your style and relevant work, not just your follower count.

Introduce my talent

Singer at a studio microphone illustrating music and voice work

SINGING · MUSIC · PRESENTING

Music & voice

A distinctive voice, musical skill or a talent for presenting: your profile helps show what you could bring to a project.

Introduce my talent

Camera operator on a production illustrating film and performance

ACTING · DANCE · PRODUCTION

Film & performance

Acting, dance, presenting or a skill of your own: together, we consider which professional contacts could be relevant to your next step.

Introduce my talent

These images illustrate possible fields of work. They do not represent promised jobs or documented placement successes.

MY NETWORK FOR YOUR NEXT STEP

More than collecting contacts. Connecting the right people.

More than 4,000 contacts in my WhatsApp Business network reflect years of personal encounters and business conversations. This includes connections with modelling agencies and professional contacts in different countries.

The value is not in sending your profile everywhere. I want to understand who you are, what you are looking for and which contact could genuinely benefit from your strengths.

Personal access

I help make the introduction rather than simply handing you a list of addresses.

An international outlook

Languages, willingness to travel, experience and availability inform each potential introduction.

Relevant opportunities

Depending on the brief, possibilities may include castings, paid projects or international modelling work.

PERSONAL · SELECTIVE · WITH YOUR CONSENT

The contact count refers to my entire business network, not to the number of contracted partner agencies.

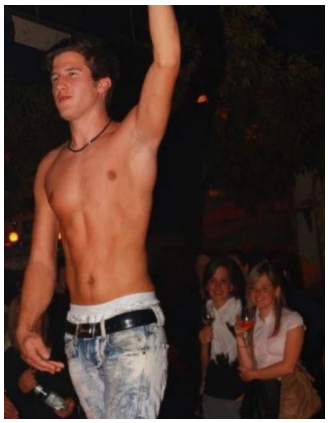

I KNOW THE OTHER SIDE OF THE CAMERA TOO

First-hand modelling experience. A personal perspective on your potential.

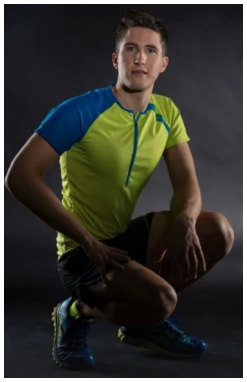

I used to work as a model myself. I understand what it feels like to stand in front of a camera and introduce yourself. That experience helps me see more than photographs: the person behind them.

More photos in the talent portal

DIGITALLY ORGANISED. PERSONALLY GUIDED.

From your profile to a relevant introduction.

The talent portal brings your application, photographs and details together in one place. Digital processes support the organisation; assessing your potential and choosing suitable contacts remain personal.

1. Create your profile

Set up your free talent account. Add current photographs, interests, experience, languages, location and, where available, your portfolio or social media profile.

2. Get to know each other

Submit your application. I review your profile and get in touch where there is potential interest, so we can discuss your goals, possibilities and questions.

3. Make a focused introduction

After review and with your separate permission, your profile is shared through the portal with selected agencies or contacts. It is not sent out indiscriminately.

4. Explore a concrete opportunity

Mutual interest may lead to a casting, project or job. The role, payment, travel arrangements and contract are discussed before any collaboration.

Technology supports. Trust matters.

Structured and automated portal processes help with organisation. People decide which introductions make sense and whether a collaboration goes ahead, with your agreement.

See the complete process

Authenticity is enough for a first impression.

Start with a natural portrait, a full-length photograph and a side view in good light. Add a few honest sentences about yourself and your interests. A professional shoot is not required. Please submit only fully clothed, non-intimate images.

Application tips in the portal

Camera operator on a production illustrating film and performance

FOR AGENCIES, BRANDS & BUSINESSES

You are not looking for just any profile. You need the right personality.

Planning a campaign, photo shoot or production, or looking for a particular talent? A clear project brief helps me assess relevant contacts and potential introductions within my network.

- Which personality and skills does the project need?
- Where and when will the work take place?
- What are the payment, usage rights and travel arrangements?

Send a project enquiry via TALENT

Profiles are introduced only where relevant to the brief and in line with the individual talent's consent.

CLARITY FROM THE BEGINNING

Your potential. Your decision.

A free first step

Applications and profile maintenance are free. You do not need to buy a book, course or any other offer to apply.

Deliberate sharing

Your profile does not become public automatically. Introductions to selected partners require your relevant consent.

Clear expectations

TALENT is independent scouting and introductions, not a promise of work, agency representation or a particular income.

Privacy

Transparency & terms

YOUR QUESTIONS. CLEAR ANSWERS.

Before you take the first step.

Who is TALENT for?

For adults aged 18 and over who would like to introduce their talent and personality. Models and women exploring modelling are the main focus. Creators, music, acting, dance, presenting and other talents are welcome too.

Do I need modelling experience?

No. Natural photographs and an honest introduction are enough for a first impression. What matters is whether your profile, goals and availability fit a potential brief.

Are my details automatically sent to every contact?

No. The portal supports digital processes and structured applications. Introductions are selective, follow personal review and require the relevant consent. Your profile is not sent to the entire WhatsApp Business network.

Could this lead to international, paid work?

Where there is a suitable brief and mutual interest, international castings and paid assignments may be possible. This is an aim of the introduction process, not a guarantee. The parties decide on selection, contracts, payment, travel costs and any further requirements.

What does it cost to apply?

Applications and profile maintenance at TALENT are free. Any later services, fees or commissions must be agreed separately and in advance. Applying does not oblige you to buy a book or a course.

Can agencies and businesses get in touch too?

Yes. The partner section of the talent portal lets you describe your project and the skills you need. I assess whether a suitable introduction is possible. Access to profiles requires the relevant permission.

YOUR NEXT STEP

Your next opportunity might begin with a conversation.

Show me who you are and where you would like to go. I bring my network, and together we explore which connection could be right for you.

A RELEVANT NEXT STEP

Authenticity is enough for a first impression.

Start with a natural portrait, a full-length photograph and a side view in good light. Add a few honest sentences about yourself and your interests. A professional shoot is not required. Please submit only fully clothed, non-intimate images.

Apply as a talent →

Open the current service page

A CLEARER PERSPECTIVE CAN LEAD TO COLLABORATION.

What would you like to move forward next?

Briefly describe your starting point, your objective and the question you need help with. You do not need to know the technical or organisational solution in advance. In an initial conversation, we can discuss which service fits your needs, which requirements matter and what a sensible next step could look like.

Arrange an initial conversation →
